RE: 17-26107 - Finished Product Spring CBWA Annual

Dear Brian Scott,

Your project: Finished Product Spring CBWA Annual, was received on Friday September 22, 2017.

The following comments are reported for your project:

Manganese was rerun from an extra bottle acidified 11/2/17 at 1525. The Mn was ND so that number was put in place of the original result. The metals bottle appears to have been contaminated as repeat runs of the bottle delivered the same values while the extra water bottle and another bottle from the pour off were both non detect. BJ 11/13/17
If you have questions phone us at 800 755-9295.

Respectfully

Patrick Miller, MS
QA Officer

Notes:

ND = Not detected above the listed practical quantitation limit (PQL) or not above the Method Detection Limit (MDL), if requested.
 PQL = Practical Quantitation Limit is the lowest level that can be achieved within specified limits of precision and accuracy during routine laboratory operating conditions.
 D.F. - Dilution Factor
